

SOX ITGC Testing

4.1 Control 1 — Access Provisioning

Control Summary

- **Control Description:** New employee system access requests are approved by the requesting manager prior to account creation
- **Control Objective:** Prevents unauthorized or excessive access from being granted to new users
- **Test Steps:** Pull a sample of 25 new hires from the HR system for the testing period; trace each to a documented, approved access request form predating the account creation date
- **Evidence Requested:** New hire listing from HR system; access request forms/tickets; account creation timestamps from IT provisioning system

Status: FAILED / EXCEPTION NOTED

4.2 Control 2 — Access Deprovisioning

Control Summary

- **Control Description:** Terminated employees' system access is revoked within 24 hours of termination
- **Control Objective:** Prevents unauthorized access by former employees
- **Test Steps:** Pull a sample of 20 terminations for the testing period; compare termination date from HR system to access revocation timestamp in IT systems
- **Evidence Requested:** Termination listing from HR system; access revocation logs from core system and Microsoft 365

Status: PASSED / NO EXCEPTIONS

4.3 Control 3 — Change Management

Control Summary

- **Control Description:** Changes to the core banking system require documented approval and testing prior to production deployment
- **Control Objective:** Prevents unauthorized or untested changes from impacting financial reporting systems
- **Test Steps:** Pull a sample of 15 production changes for the testing period; trace each to a documented change request with approval and test evidence prior to deployment
- **Evidence Requested:** Change management log/ticketing export; approval records; test plan and results documentation

4.4 Finding 1 — Access Provisioning Exception

Condition: 2 of 25 sampled new-hire access requests (8%) were provisioned prior to documented manager approval

Criteria: Per the Access Management Policy, all access must be approved by the requesting manager before provisioning

Cause: Manual approval routing via email allows IT to act on verbal approval in urgent onboarding cases

Effect: Increases risk of unauthorized or excessive access being granted without an auditable approval trail

Recommendation: Implement a system-enforced approval workflow that blocks account provisioning until documented approval is logged in the ticketing system

Control Domain	Result	Exceptions
Access Provisioning	Failed	2 of 25 (8%)
Access Deprovisioning	Passed	0 of 19 (0%)
Change Management	Passed	0 of 15 (0%)
